

## Optional Accessories

### Upgrade your system

Add up to 20 devices to customise your system

**Indoor MotionViewer™**  
- Additional security where you need it

**Outdoor MotionViewer™**  
- Secure detached garages, porches, patios and storage sheds

**Door/Window Contacts**

**Smoke Detector**  
- Additional protection for family and valuables

**Remote Control**  
- Battery powered remote arming

**Outdoor Prox-Tag Reader**  
- Disarm the system before entering the building

**Indoor Siren**  
- Increase deterrence with additional sirens

**Outdoor Siren/Strobe**  
- Improve police response and deterrence

Does your old burglar alarm...  
see nothing? hear nothing? speak nothing?

## Priority Police Response For Greater Security

Videofied provides the monitoring operator with an actual video of the intrusion. The video and 2-way voice verify that the alarm is an actual crime-in-progress and not a costly false alarm. With law enforcement increasingly pressured by budget cuts, video verified alarms help police capture more intruders, providing better protection.

A sophisticated motion sensor combined with a night vision camera and illuminators, the MotionViewer, detects and captures the intrusion on video. Monitoring personnel immediately see a 10 second video clip of the actual intrusion and can use 2-way voice to challenge and verify it. More than an alarm, Videofied is a true security system combining detection, video and voice to give greater protection to your valuables and your family.

## Security - Not A Nanny Cam

This is NOT a surveillance system; we separate security from surveillance to protect privacy. If you are looking for a nanny-cam, buy something else. With Videofied, no one can "look in" remotely unless the camera has been activated by the alarm system. Video alarms are only sent when the alarm panel calls the monitoring station during an intrusion, downloading images from the MotionViewer. Since MotionViewer only record alarms, the three small batteries operate up to four years. No wires means no peeking.

### Standard Videofied XL Kit Features:

- Night vision wireless MotionViewer detect intruders
- Internal GPRS/GSM modem transmits video & two way voice
- Clean simple wireless installation without drilling messy holes to run power or phone lines
- Immune to cut phone lines or network cables
- Integrated proximity tag arming/disarming
- Battery life on all devices including panel - up to 4 years

## Simple to Use Prox-Tag Arming

A proximity reader in the keypad means users can easily arm/disarm the system by simply moving the tag near the keypad. The system gives audible and visual feedback that it is arming/disarming. Every person in the building can use their own prox-tag and forget about entering codes. The prox-tags are waterproof, unpowered and last for years. For additional convenience, there is an optional wireless outdoor prox-tag reader that can be mounted on the outside of the building to arm/disarm before entering.
