Does your old burglar alarm ...

see nothing ?

hear nothing ?

speak nothing ?

Video is now FREE!

The wireless video security system UNPLUGGED with 2-way voice.

The VIDEOFIED MotionViewer combines a PIR, camera and illuminators into a self-powered device that can be instantly mounted anywhere security is needed. The panel communicates alarms to the Central Station over the cell network using GSM (2-way voice) and GPRS (10 second video of the intrusion). Video Verification and Voice Verification on a single system – all for the same price as a blind burglar alarm.

The VIDEOFIED XL literally needs no wires or cables, not even to power the panel. The VIDEOFIED XL combats escalating false alarm fines and fast and efficient wireless installations eliminate customer mess and dealer stress. Affordable residential video security systems monitored by the Central Station - **VIDEOFIED XL**.

The MotionViewer - a virtual eyewitness

More than an intrusion alarm, VIDEOFIED XL with voice and video gives professional monitoring personnel eyes and ears to enable them to provide effective police re-

sponse. With law enforcement pressured by budget cuts for greater efficiency, verified alarms help police deliver more apprehensions.

Wireless MotionViewers use PIR technology to trigger the night vision camera and film the intrusion. The video alarm is sent to monitoring personnel who immediately see a 10 second clip of the intrusion and can use 2-way voice to challenge and verify. VIDEOFIED XL makes law enforcement more efficient and Central Stations more effective.
