

## Optional Accessories

Upgrade your system  
Add up to 24 devices to customize your system

Indoor MotionViewer  
- Additional security where you need it

Outdoor MotionViewer  
- Secure detached garages, porches, patios and storage sheds

Door/Window Contacts

Wireless Keypad  
- This is an arming/disarming device also for programming the XL700.

Remote Control  
- Battery powered remote arming

Outdoor Prox-Tag Reader  
- Disarm the system before entering the building

Badge  
- Proximity Arming Tag

Outdoor Siren/Strobe  
- Improve police response and deterrence

## Security - Not A Nanny Cam

This is NOT a surveillance system; we separate security from surveillance to protect privacy. If you are looking for a nanny-cam, buy something else. With Videofied, no one can "look in" remotely unless the camera

has been activated by the alarm system. Video alarms are only sent when the alarm panel calls the monitoring station during an intrusion, downloading images from the MotionViewer. Since MotionViewers only record alarms, the three small batteries operate up to four years. No wires means no peeking .

## Upgrade to Response — Ability .

 videofied™

## Priority Police Response For Greater Security

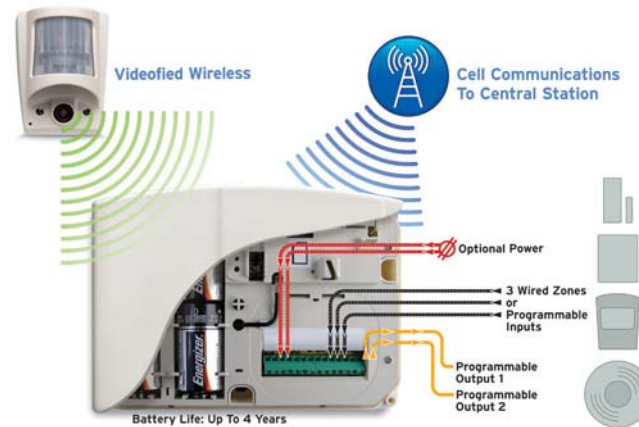

Videofied® provides the monitoring operator with an actual video of the intrusion. The video verifies the alarm is an actual crime-in-progress and not a costly false alarm. With law enforcement requiring verification prior to priority response, video verified alarms help police capture more intruders, providing better protection.

A sophisticated motion sensor combined with a night vision camera and illuminators, the Motion-Viewer, detects and captures the intrusion on video. Monitoring personnel immediately see a 10 second video clip of the actual intrusion and can use 2-way voice to challenge and verify it. More than an alarm, Videofied is a true security system combining detection, video and voice to give greater protection to your valuables and your family.

## Takeover Existing Systems Hybrid Wire/Wired Video Alarm

### Create New System

The XT used in "Stand Alone Mode" is a complete security system combining wired zones and Videofied in a single panel. It is perfect for "stay at home arming." In "stay" mode privacy is protected - only the contacts on the perimeter arm while the MotionViewers remain "off" unless there is an intrusion.

The "Stand Alone Mode" is perfect to re-use the wired zones that are already installed or to incorporate wired devices in a new install.

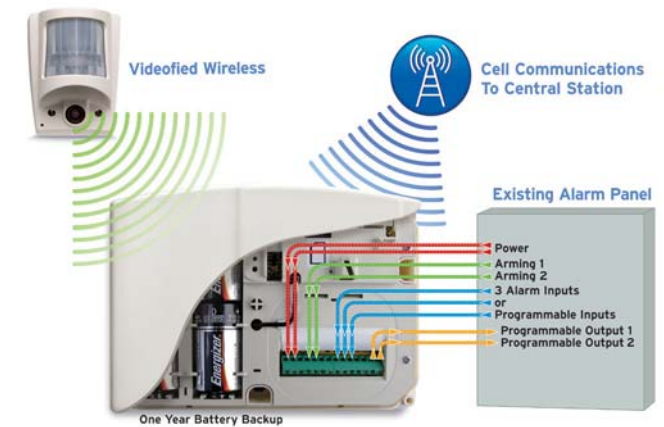

### Features Include

- Up to four year battery life when used without power
- Internal GPRS modem
- 3 supervised wired zones/programmable inputs

### Applications

- Cordless/wireless vacant property protection
- Video verified cordless/wireless panic alarm (Hold up)
- Use 3rd party devices or cordless/wireless contacts to activate the MotionViewer camera as a mapped device

## Upgrade Existing Systems Cell Back-up with Video Alarm

### Improve Current System

The XT used in "Upgrade Mode" provides both GPRS back-up and cordless/wireless Videofied MotionViewers in a single package.

The "Upgrade Mode" uses the existing system to arm/disarm the XT. Alarms and videos of intruders are sent over the GPRS network directly to the central station. The XT simply piggybacks on top of the existing system and there is no need to change keypads, codes, etc.

### Features Include

- Up to one year battery back-up in case of power failure
- Internal GPRS modem
- Can operate up to 24 cordless/wireless MotionViewers

### Applications

- Add outdoor video protection to an existing system
- Replace existing PIRs with MotionViewers
- Protect your patio, rooftop, outbuilding without trenching
